A business development tool for professionals, marketers, sales directors, consultants and strategists seeking to understand and reach middle market American companies. It covers important business sectors, from InfoTech to health care to telecommunications.

Profiles of more than 500 leading US middle market companies. Includes business glossary, a listing of business contacts, indexes and database on CD-ROM. This monograph focuses on the level of management culture development in organizations attempting to disclose it not only with the help of theoretical insights but also by the approach based on employees and managers. Why was the term "management culture" that is rarely found in literature selected for the analysis? We are quite often faced with problems of terminology. Especially, it often happens in the translation from one language to another. While preparing this monograph, the authors had a number of questions on how to decouple the management culture from organization's culture and from organizational culture, how to separate management culture from managerial culture, etc. However, having analysed a variety of scientific research, it appeared that there is no need to break down the mentioned cultures because they still overlap. Therefore, it is impossible to completely separate the management culture from the formal or informal part of organizational culture. Management culture inevitably exists in every organization, only its level of development may vary. Are you fully integrated with your financial systems? Are you paying two different prices for a similar product or service? How do you monitor and rate your suppliers? How do you manage supplier content? Why does the procure-to-pay process take so long? Using the theory of management fashions proposed in the 1990s by Eric Abrahamson, Krzysztof Klincewicz analyzes the changing popularity of management concepts accompanied by solutions. Among these are management bestsellers, consulting services, software systems, methodologies, and approaches to organizational change, training courses, professional certifications and even new corporate positions. The book presents the phenomena of management fashions as being the key driver for the development of the management knowledge industry, consisting of consulting companies, computer firms, publishing houses, professional institutes, and other organizations involved in the launching and the promotion of new management techniques. The author supplements the existing body of knowledge by focusing on the supply-side of management fashions, particularly the strategies and marketing techniques of solution vendors, and proposes a model of relations between management ideas and tangible solutions, explaining how bestselling ideas are turned into objects and institutions. The empirical research described in this volume involves multiple methods, including discourse volume analysis and qualitative historical techniques. Included also is a comprehensive overview of the recent relevant developments in sociology, marketing, and organization sciences, in which the author draws on the heritage of praxiology by taking a meta-level perspective on the propositions of management science. "It argues convincingly that companies should look at what solutions they can provide consumers with, rather than looking at what products they can foist upon them ... This is an effective guide to delivering real value to the customer through genuine innovative thinking." The Marketer "One of the most successful business solutions tomes ever published." PCPlus Business Based partly on IBM's own transformation, and partly on the transformations that IBM has helped its clients to achieve, this groundbreaking book shows how companies can increase sales and improve margins by introducing a range of solutions. Highly readable, motivational and fast-paced, Business Solutions On Demand is packed with examples from many diverse industries. The authors emphasize that for today's business to compete and survive, it has to exceed the expectations of its customers. Technological advancement, globalization, increased competition, market saturation and easy access to information are all conspiring to make traditional business models redundant.
